

Designing with the AMD UltraScale[™] and UltraScale+[™] Families

2 days - 14 hours

OBJECTIVES

- After completing this training, you will have the necessary skills to:
 - $\,\circ\,$ 1- Describe the new CLB capabilities and the impact that they make on your HDL coding style
 - $\circ~$ 2- Define the block RAM, FIFO, UltraRAM, and DSP resources available
 - $\circ~$ 3 Properly design for the I/O and SERDES resources
 - 4 Identify the MMCM, PLL, and clock routing resources included
 - 5 Describe the additional features of the dedicated transceivers
 - 6 Effectively migrate your IP and design to the UltraScale architecture as quickly as possible

PREREQUISITES

- Basic knowledge FPGAs architectures
- A successful first experience of designing an VHDL-based FPGA using Vivado[™] Design Suite

CONCERNED PUBLIC

- Technicians and Engineers in Digital Electronics
- All our training courses are given at a distance and are accessible to people with reduced mobility.
- Our partner AGEFIPH accompanies us to implement the necessary adaptations related to your disability.
